

Opinion formation through language games

Animesh Mukherjee

Department of Comp. Sc. & Engg.,

Indian Institute of Technology, Kharagpur

Language and its meaning!

- Once a teacher asked one of his students to get a good presentation the next day ...

Language and its meaning!

- And on that fine next day ...

Language dynamics: A Physical System Perspective

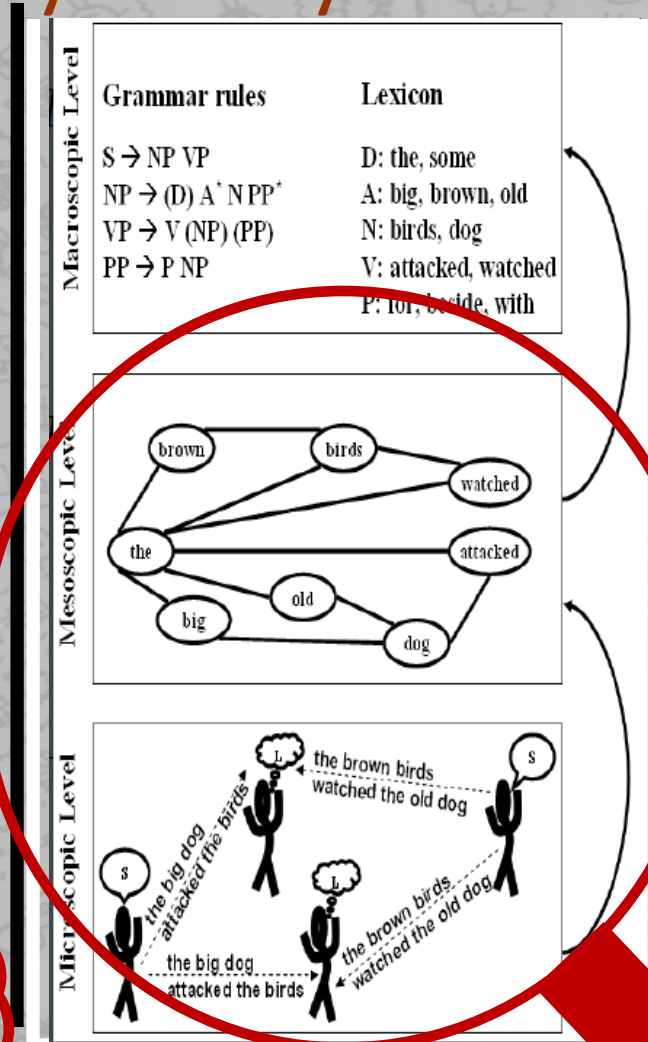

Language as a whole
(grammatical constructs)

Language as a set of
interactions among
linguistic units

Language as a set
of utterances

Macroscopic level

Mesoscopic level

Microscopic level

The Naming Game

Speaker

Hearer

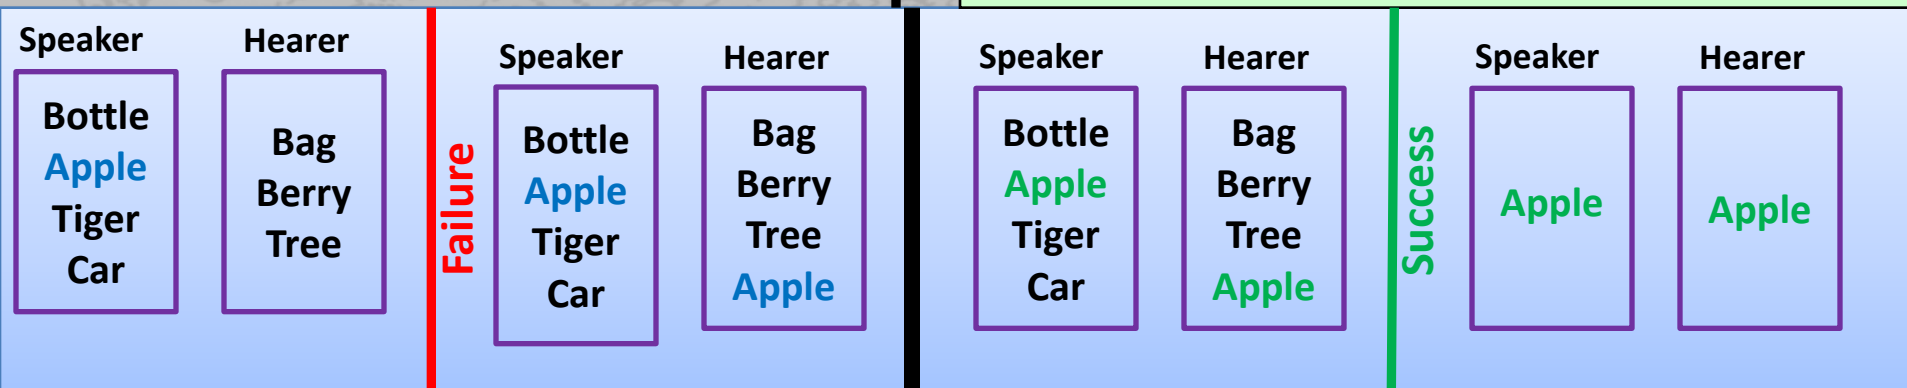

- Perceive scene
- Choose topic
- Conceptualize
- Verbalize

- Interpret utterance
- Perceive scene
- Apply meaning
- Point to referent

In silico abstraction

- Interaction of **N** artificial agents communicate to agree on the **name** of an object in the environment.
- Each interaction counts as a time step of the dynamics
- Agents can keep in their memory an unlimited number of words
- Games proceed through a series of **success** and **failure** interactions
- One studies the phenomenological properties – total number of words in the system $N_w(t)$, number of unique words $N_d(t)$, maximum memory N_w^{\max} , time to reach agreement t_{conv} etc.

Scaling relations for various topologies

	N^w_{max}	t_{max}	t_{conv}
Mean-field	$N^{1.5}$	$N^{1.5}$	$N^{1.5}$
Scale-free	N	N	$N^{1.4}$
Erdos-Renyi	N	N	$N^{1.4}$
Small-world	N	N	$N^{1.4}$

What about time-varying networks?

- Social interactions and human activities are intermittent
- Links appear and disappear from the system
- As time progresses, societal structure keeps changing with social conventions, shared cultural and linguistic patterns reshaping themselves

CNeRG lab (time t)

CNeRG lab (time $t + 1$)

Datasets

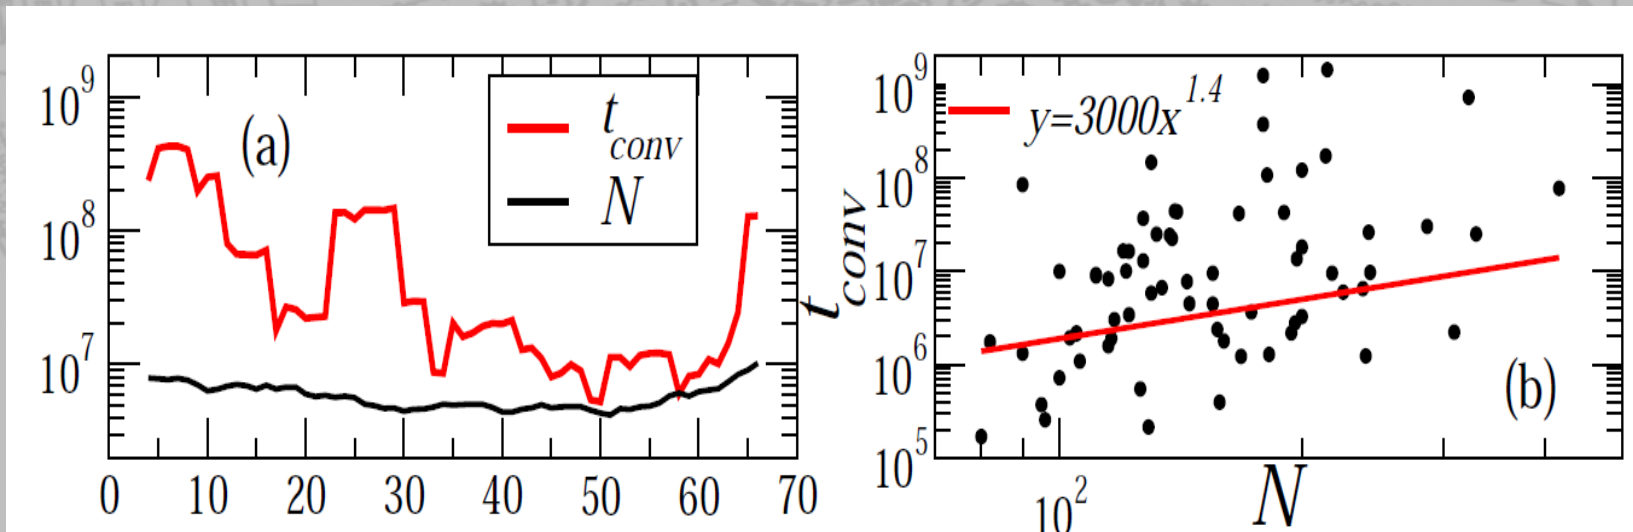

- Face-to-face interaction (SG)
 - Science Gallery in Dublin, Ireland (2009)
 - “INFECTIOUS:STAY AWAY” initiative for 69 days
- Face-to-face interaction (HT)
 - conference attendees of the ACM Hypertext 2009
- Nodes -> visitors/participants
- Edges -> close-range face-to-face proximity existent for 20 seconds

Scaling of N_w^{max} and t_{max}

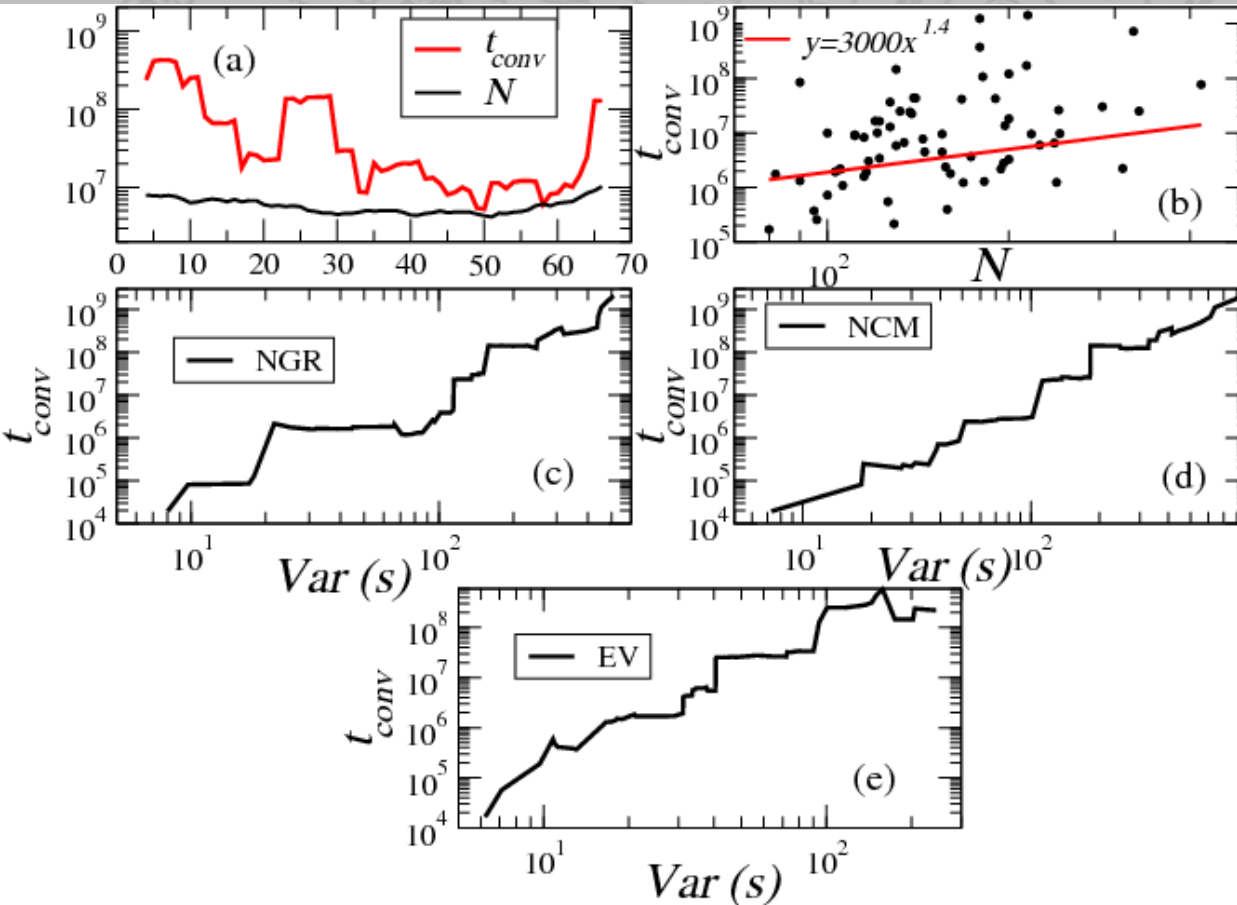

Scaling Relations

- $N_w^{\max} \sim O(N)$ [✓]
- $t_{\max} \sim O(N)$ [✓]
- But what about t_{conv} ? ~~$O(N^{1.4})$~~

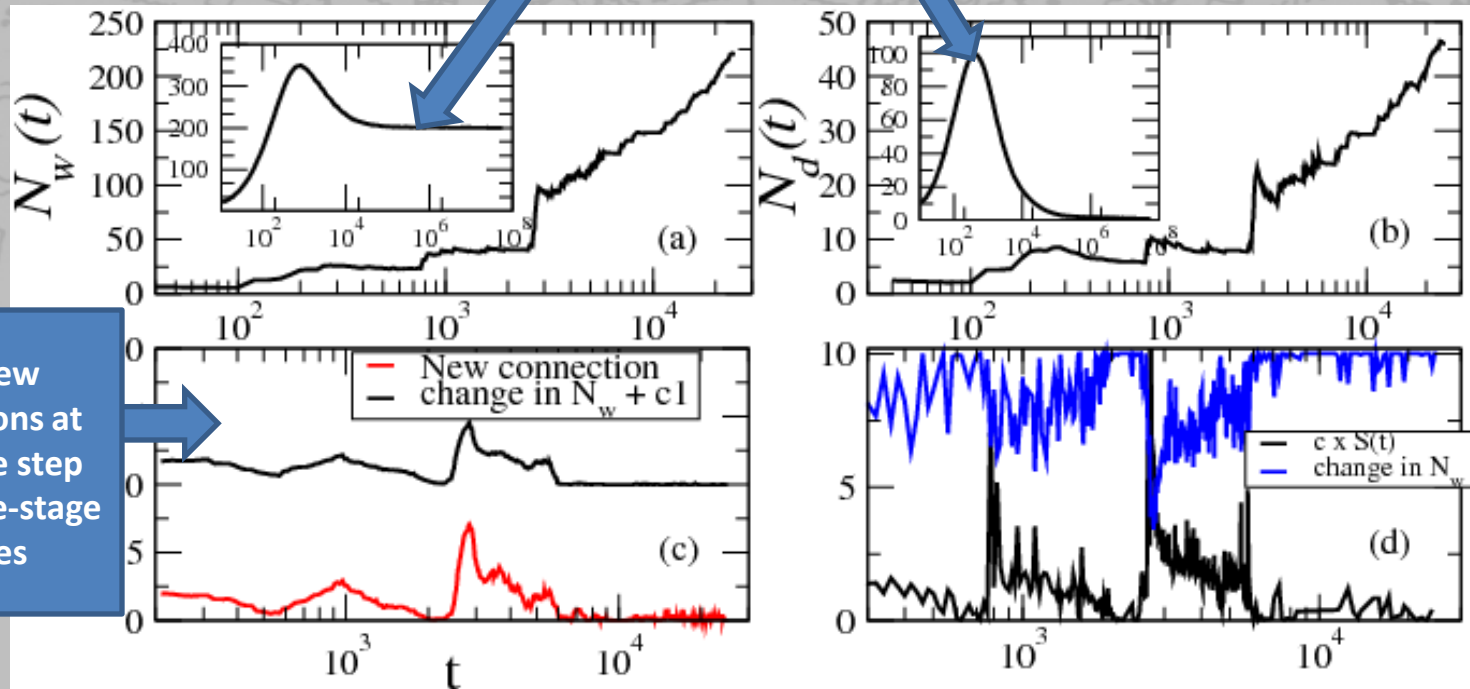

Opinions trapped in communities

Time resolved SG data

- Day 9 (representative)

Composite Network

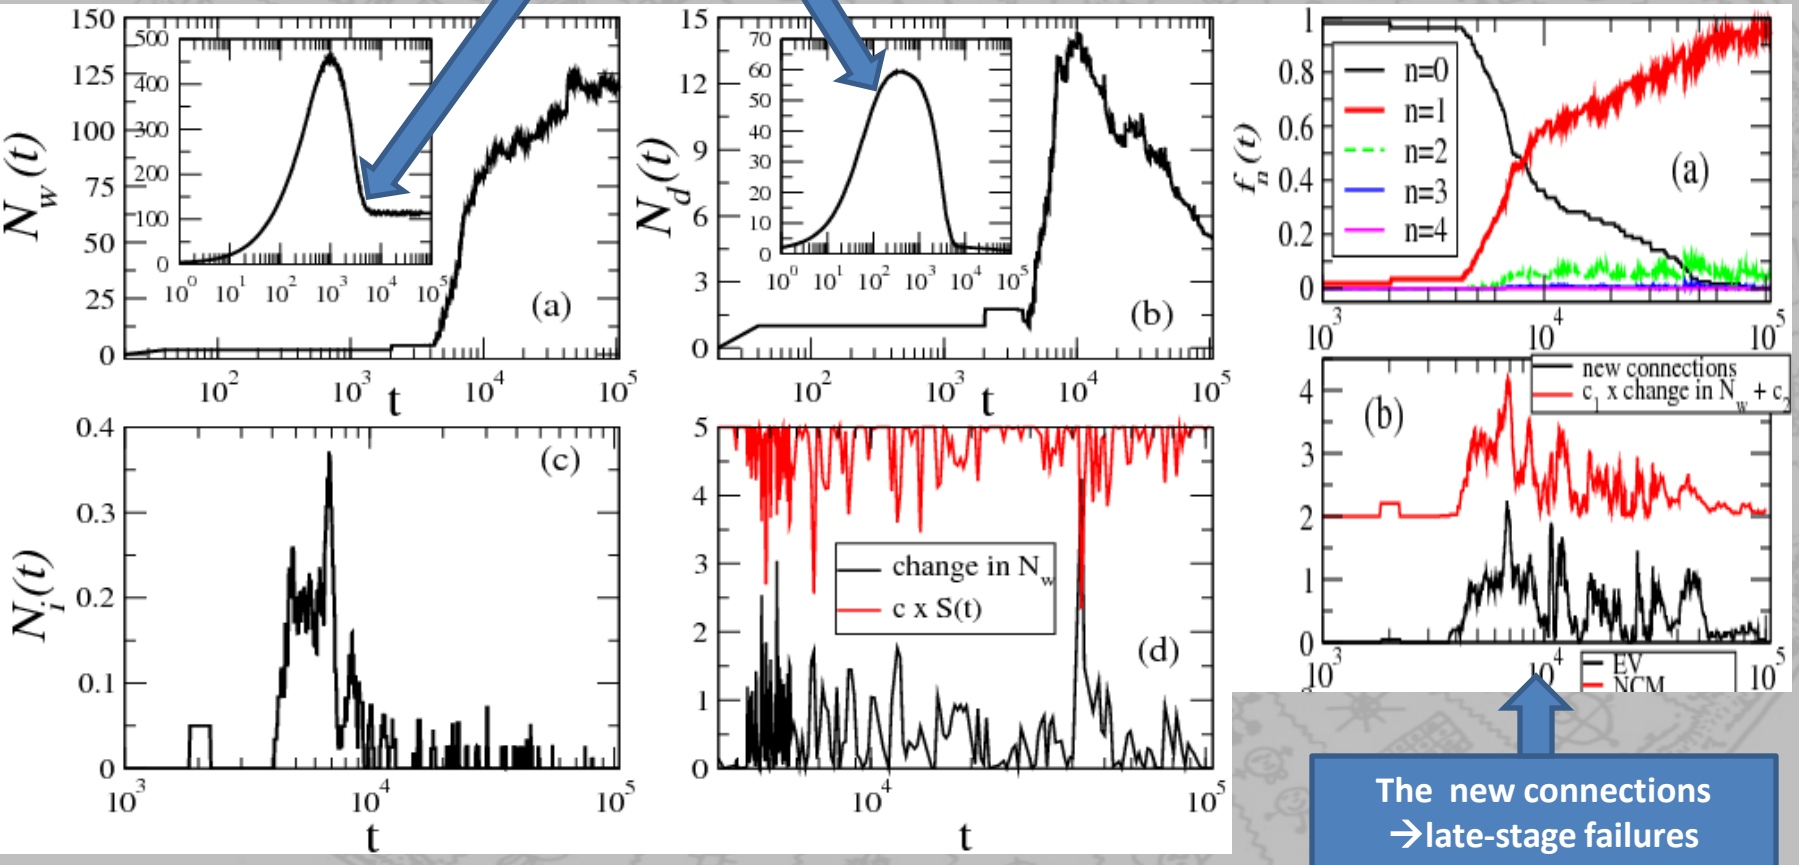

The new connections at each time step causes late-stage failures

Maity, Venkat and Mukherjee, Opinion formation in time-varying social networks: the case of the naming game, *Physical Review E*, September 14, 2012, **86**, 036110.

HT Dataset

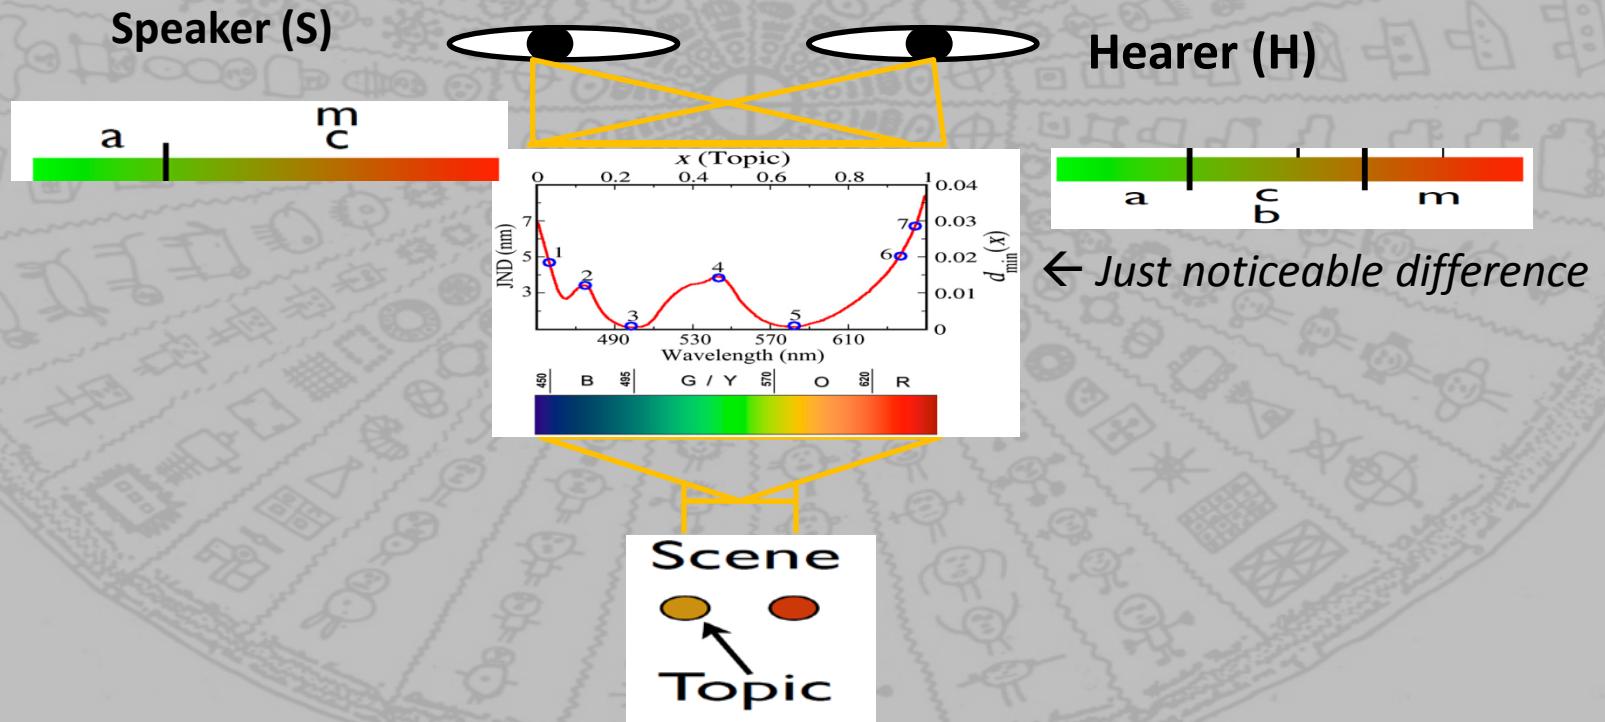

Composite Network

Maity, Venkat and Mukherjee, Opinion formation in time-varying social networks: the case of the naming game, *Physical Review E*, September 14, 2012, **86**, 036110.

From Naming to Color Naming

- Color categorization: a central issue both in linguistics and in cognitive science
- Evolution of English color categories [English color terms → gradual semantic shift from largely brightness color concepts (Old English) to almost exclusively hue concepts (Middle English)]

The Category Game

Locate the Stimuli

two stimuli colliding on the same perceptual category → a new boundary is created

Discrimination

Invention of new words

Failure

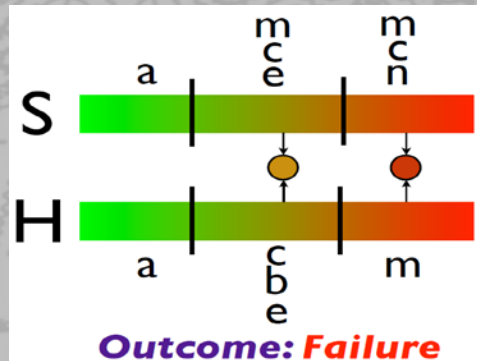

Utterance

Success

Utterance

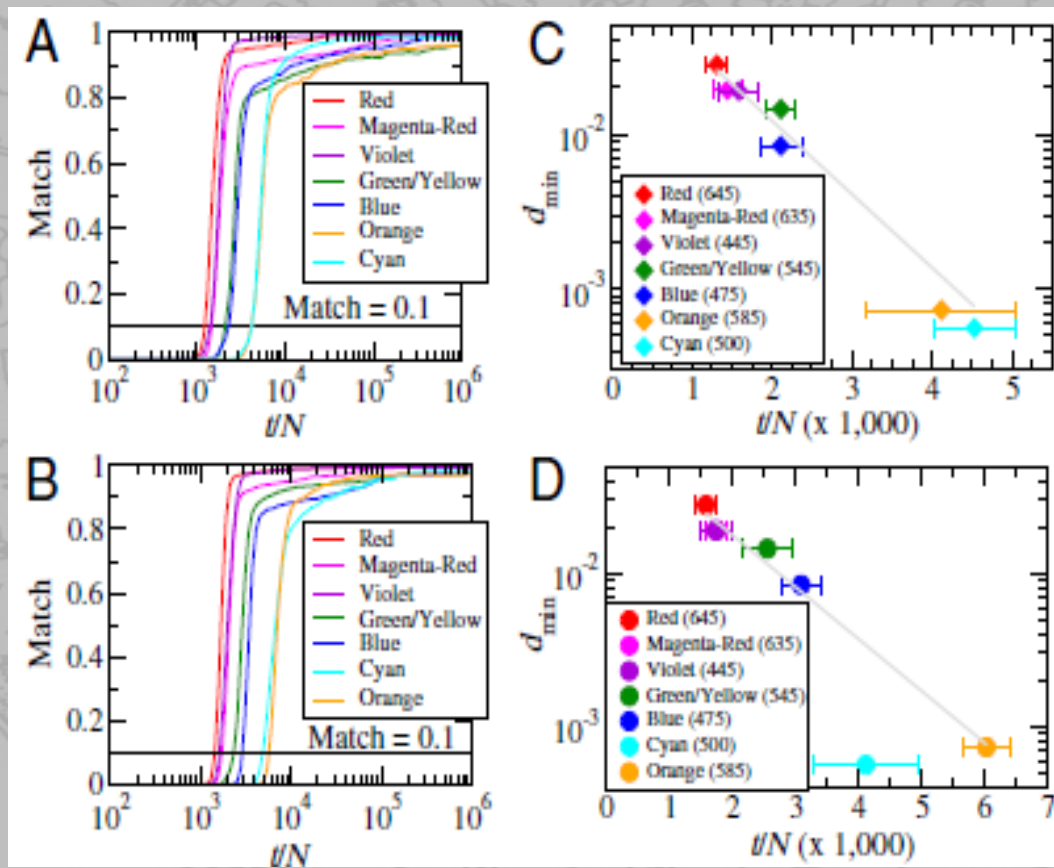

Outcome: Failure

Outcome: Success

The Color Hierarchy
