# GRAPH THEORY 

Tutorial - 4

1) Let G be a simple n -vertex graph with $\mathrm{n} / 2-1 \leq$ $\delta(\mathrm{G}) \leq \mathrm{n}-2$. Prove that G is k -connected for all k with $\mathrm{k} \leq 2 \delta(\mathrm{G})+2-\mathrm{n}$.
2) If $G$ be simple $n$-vertex graph.
(a) If $\delta(\mathrm{G}) \geq\llcorner\mathrm{n} / 2\lrcorner$, then prove that, $\kappa^{\prime}(\mathrm{G})=\delta(\mathrm{G})$.
(b) If $\mathrm{d}(\mathrm{x})+\mathrm{d}(\mathrm{y}) \geq \mathrm{n}-1$ whenever ! $(\mathrm{x} \leftrightarrow \mathrm{y})$, then prove that, $\kappa^{\prime}(\mathrm{G})=\delta(\mathrm{G})$.
