Introc	luction
1111100	luction

(ロ)、

Introduction to digital computers

- Introduction to digital computers
- Basic programming constructs
  - Variables and simple data types
  - Assignments
  - Input/output
  - Conditions and branching
  - Loops and iteration
  - Iterative searching and sorting algorithms

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ● ● ● ● ●

- Introduction to digital computers
- Basic programming constructs
  - Variables and simple data types
  - Assignments
  - Input/output
  - Conditions and branching
  - Loops and iteration
  - Iterative searching and sorting algorithms
- Advanced programming constructs
  - Functions and recursion
  - Recursive sorting algorithms
  - Arrays and strings
  - Structures
  - Pointers and dynamic memory allocation

Syllabus

## Syllabus (contd.)

・ロ・・母・・ヨ・ ヨ・ うへぐ

### Syllabus (contd.)

Performance analysis of programs

## Syllabus (contd.)

Performance analysis of programs

- Data structures
  - Abstract data types
  - Ordered lists
  - Stacks and queues

## Syllabus (contd.)

Marks distribution

### Marks distribution

Marks distribution

#### Marks distribution

• Two class tests:  $10 \times 2 = 20$ 

- Two class tests:  $10 \times 2 = 20$
- Mid-semester test: 30

#### Marks distribution

• Two class tests:  $10 \times 2 = 20$ 

<□> <@> < E> < E> E のへで

- Mid-semester test: 30
- End-semester test: 50

- Two class tests:  $10 \times 2 = 20$
- Mid-semester test: 30
- End-semester test: 50
- Final marks of a student:  $M = m \times \alpha$ , where

- Two class tests:  $10 \times 2 = 20$
- Mid-semester test: 30
- End-semester test: 50
- Final marks of a student:  $M = m \times \alpha$ , where
  - *m* = Total marks obtained in 100, and

- Two class tests:  $10 \times 2 = 20$
- Mid-semester test: 30
- End-semester test: 50
- Final marks of a student:  $M = m \times \alpha$ , where
  - *m* = Total marks obtained in 100, and
  - $\alpha =$ Classes attended / Total number of classes.

Test schedule (tentative)

#### Tentative schedule of theory tests

#### Tentative schedule of theory tests

Class Test 1: First week of September/February

#### Tentative schedule of theory tests

- Class Test 1: First week of September/February
- Mid-semester Test: As per institute schedule

#### Tentative schedule of theory tests

• Class Test 1: First week of September/February

▲ロ → ▲周 → ▲目 → ▲目 → 目 → の Q ()

- Mid-semester Test: As per institute schedule
- Class Test 2: First week of November/April

#### Tentative schedule of theory tests

- Class Test 1: First week of September/February
- Mid-semester Test: As per institute schedule
- Class Test 2: First week of November/April
- End-Semester Test: As per institute schedule

#### Tentative schedule of theory tests

- Class Test 1: First week of September/February
- Mid-semester Test: As per institute schedule
- Class Test 2: First week of November/April
- End-Semester Test: As per institute schedule
- Two or three lab tests are conducted by respective lab instructors

Coverage schedule

#### Tentative schedule for coverage

#### Tentative schedule for coverage

Before Class Test 1: Until "iterations" (all loop constructs)

#### Tentative schedule for coverage

• Before Class Test 1: Until "iterations" (all loop constructs)

<□> <@> < E> < E> E のへで

Before MidSem Test: Until "introduction to pointers"

#### Tentative schedule for coverage

▲ロト ▲園 ト ▲ 臣 ト ▲ 臣 ト ● ① ● ○ ● ●

#### Skeleton of a C program

Include header files
Structure of a C program

#### How to write C programs

#### Skeleton of a C program

Include header files

Declare global variables, constants and function prototypes

▲ロ → ▲周 → ▲目 → ▲目 → □ → ○ ○ ○

Structure of a C program

#### How to write C programs

Skeleton of a C program

Include header files

Declare global variables, constants and function prototypes

Function bodies

Structure of a C program

#### How to write C programs

Skeleton of a C program

Include header files

Declare global variables, constants and function prototypes

Function bodies

There must be a **main** function in any C program.

Structure of a C program

An example

#### A complete example

```
#include <stdio.h>
#define PI 4 BY 3 4.1887902048
double radius = 10;
double sphereVol ( double r )
  return PI_4_BY_3 * r * r * r;
main ()
{
   double area;
   area = sphereVol(radius);
   printf("Radius = %lf, volume = %lf.\n", radius, area);
```

Some simple C programs

The traditional starter

```
The traditional starter
```

```
#include <stdio.h>
main ()
{
    printf("Hello, world!\n");
}
```

Some simple C programs

The traditional starter

```
The traditional starter
```

```
#include <stdio.h>
main ()
{
    printf("Hello, world!\n");
}
```

This program takes no input, but outputs the string "Hello, world!" in a line.

Some simple C programs

The short-circuit program

#### The short-circuit program

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",n);
}
```

Some simple C programs

The short-circuit program

### The short-circuit program

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",n);
}
```

This program accepts an integer as input and outputs the same integer.

Some simple C programs

The square finder

#### The square finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",n*n);
}
```

Some simple C programs

The square finder

#### The square finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",n*n);
}
```

This program takes an integer *n* as input and outputs the square  $n^2$  of *n*.

Some simple C programs

A faulty reciprocal finder

### A faulty reciprocal finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",1/n);
}
```

▲ロ → ▲周 → ▲目 → ▲目 → 目 → の Q ()

Some simple C programs

A faulty reciprocal finder

### A faulty reciprocal finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",1/n);
}
```

The division 1/n is of integers (quotient).

▲□▶★@▶★≧▶★≧▶ ≧ のへで

Some simple C programs

A faulty reciprocal finder

# A faulty reciprocal finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%d\n",1/n);
}
```

The division 1/n is of integers (quotient).

The format %d is for printing integers.

Some simple C programs

The correct reciprocal finder

#### The correct reciprocal finder

```
#include <stdio.h>
main ()
{
    int n;
    scanf("%d",&n);
    printf("%f\n",1.0/n);
}
```

PDS laboratory

# **PDS Laboratory**

PDS laboratory

Log in

# Getting started

PDS laboratory

Log in

### Getting started

• Switch on your **monitor**.

PDS laboratory

Log in

#### Getting started

- Switch on your monitor.
- Switch on your PC.

PDS laboratory

Log in

# Getting started

- Switch on your monitor.
- Switch on your PC.
- Allow the machine to **boot**. Wait until the log in prompt comes.

PDS laboratory

Log in

# Getting started

- Switch on your **monitor**.
- Switch on your PC.
- Allow the machine to **boot**. Wait until the log in prompt comes.
- Supply your log-in and password:

```
Login: s<nn>
Password: s<nn>
```

- Here s is your section (a for 1, b for 2, and so on)
- <nn> is the number of your PC.

This opens your **window manager** (usually KDE) with **icons**, the **bottom panel**, and so on. You are now ready to start your work.

PDS laboratory

Edit, compile and run

(ロト (個) (E) (E) (E) (E) の(の)

PDS laboratory

Edit, compile and run

### Getting started

Click on the terminal icon to open a shell (command prompt).

PDS laboratory

Edit, compile and run

# Getting started

- Click on the **terminal** icon to open a **shell** (command prompt).
- Edit your program (new or already existing) by an editor.

▲ロ → ▲周 → ▲目 → ▲目 → 目 → の Q ()

emacs myprog.c &

PDS laboratory

Edit, compile and run

# Getting started

- Click on the terminal icon to open a shell (command prompt).
- Edit your program (new or already existing) by an editor.
- Write your program in the editor and save it.

PDS laboratory

Edit, compile and run

# Getting started

- Click on the terminal icon to open a shell (command prompt).
- Edit your program (new or already existing) by an editor.
- Write your program in the editor and **save** it.
- Go to the shell and compile your program:

```
cc myprog.c
If compilation is successful, an executable called a.out
will be created.
```

PDS laboratory

Edit, compile and run

# Getting started

- Click on the terminal icon to open a shell (command prompt).
- Edit your program (new or already existing) by an editor.
- Write your program in the editor and **save** it.
- Go to the shell and compile your program:

```
cc myprog.c
If compilation is successful, an executable called a.out
will be created.
```

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQ@

- Run your program:
  - ./a.out

PDS laboratory

Edit, compile and run

# Getting started

- Click on the **terminal** icon to open a **shell** (command prompt).
- Edit your program (new or already existing) by an editor.
- Write your program in the editor and **save** it.
- Go to the shell and compile your program:

```
cc myprog.c
If compilation is successful, an executable called a.out
will be created.
```

• Run your program:

./a.out

• Continue your edit-compile-debug-run-debug cycle.

PDS laboratory

Shut down

# Getting started

PDS laboratory

Shut down

• Close all the windows you opened.

PDS laboratory

Shut down

- Close all the windows you opened.
- Log out from your window manager. This leaves you again in the log-in console.

▲ロ → ▲周 → ▲目 → ▲目 → 目 → の Q ()

PDS laboratory

Shut down

- Close all the windows you opened.
- Log out from your window manager. This leaves you again in the log-in console.
- Select the item to **shut down** the machine. Wait until the machine completely shuts down.

PDS laboratory

Shut down

#### Getting started

- Close all the windows you opened.
- Log out from your window manager. This leaves you again in the log-in console.
- Select the item to **shut down** the machine. Wait until the machine completely shuts down.
