LOGICAL DEDUCTION IN AI

PROPOSITIONAL LOGIC TO PREDICATE LOGIC

Partha P Chakrabarti
Indian Institute of Technology Kharagpur

Deduction Using Propositional Logic: Steps

Choice of Boolean Variables a b c d ... which can take values $\frac{\text{true}}{\sim}$ or $\frac{\text{false}}{\sim}$ $\frac{1}{\sim}$ $\frac{1}{\sim$

Boolean Formulae developed using well defined connectors \sim , \wedge , \vee , \rightarrow , etc, whose meaning (semantics) is given by their truth tables.

Codification of Sentences of the argument into Boolean Formulae.

Developing the <u>Deduction Process</u> as obtaining truth of a <u>Combined</u> <u>Formula</u> expressing the complete argument.

Determining the Truth or Validity of the formula and thereby proving or disproving the argument and Analyzing its truth under various, Interpretations.

Deduction Using Propositional Logic: Example 1

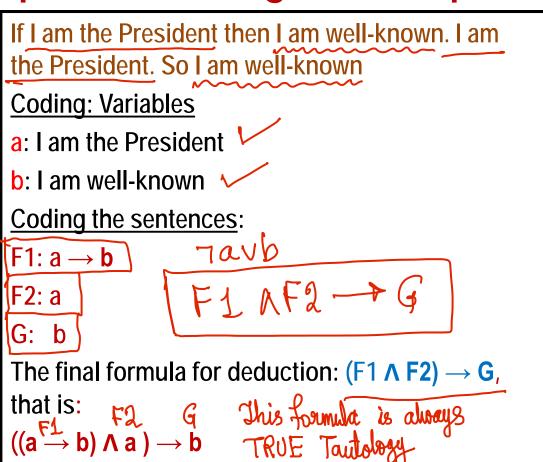

<u>Choice of Boolean Variables</u> a, b, c, d, ... which can take values <u>true</u> or <u>false</u>.

Boolean Formulae developed using well defined connectors \sim , \wedge , \vee , \rightarrow , etc, whose meaning (semantics) is given by their truth tables.

Codification of Sentences of the argument into Boolean Formulae.

Developing the Deduction Process as obtaining truth of a <u>Combined Formula</u> expressing the complete argument.

<u>Determining the Truth</u> or Validity of the formula and thereby proving or disproving the argument and Analyzing its truth under various Interpretations.

Deduction Using Propositional Logic: Example 1

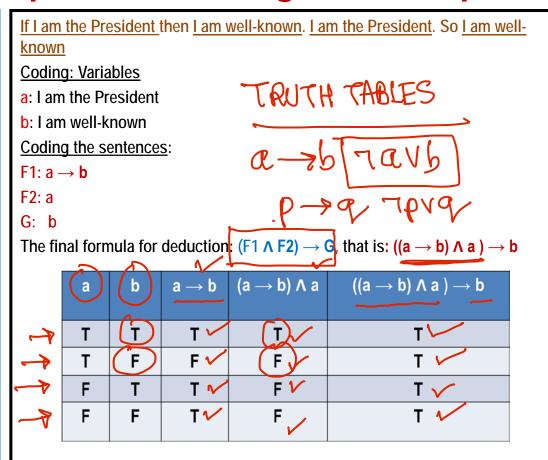

Boolean variables a, b, c, d, ... which can take values <u>true</u> or <u>false</u>.

Boolean formulae developed using well defined connectors \sim , \land , \lor , \rightarrow , etc, whose meaning (semantics) is given by their truth tables.

Codification of sentences of the argument into Boolean Formulae.

Developing the Deduction Process as obtaining truth of a combined formula expressing the complete argument.

Determining the Truth or Validity of the formula and thereby proving or disproving the argument and Analyzing its truth under various interpretations.

Deduction Using Propositional Logic: Example 2

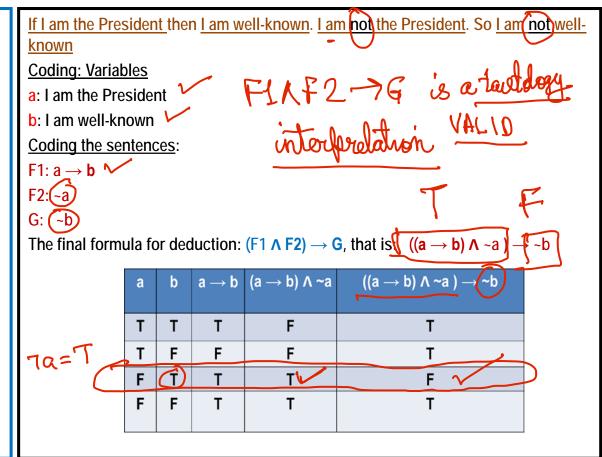

Boolean variables a, b, c, d, ... which can take values <u>true</u> or <u>false</u>.

Boolean formulae developed using well defined connectors \sim , \wedge , \vee , \rightarrow , etc, whose meaning (semantics) is given by their truth tables.

Codification of sentences of the <a>rule argument into Boolean Formulae.

Developing the Deduction Process as obtaining truth of a combined formula expressing the complete argument.

Determining the Truth or Validity of the formula and thereby proving or disproving the argument and \checkmark Analyzing its truth under various interpretations.

Insufficiency of Propositional Logic

Wherever Mary goes, so does the lamb. Mary goes to school. So the lamb goes to school.

No contractors are dependable. Some engineers are contractors. Therefore some engineers are not dependable.

All dancers are graceful. Ayesha is a student. Ayesha is a dancer. Therefore some student is graceful.

Every passenger is either in first class or second class. Each passenger is in second class if and only if he or she is not wealthy. Some passengers are wealthy. Not all passengers are wealthy. Therefore some passengers are in second class.

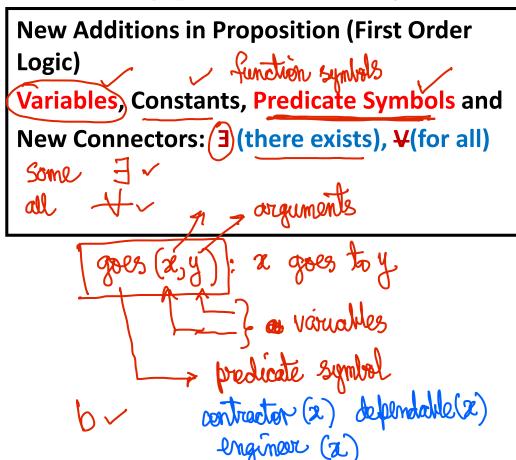

Predicate Logic First Order Logic

Wherever Mary goes, so does the lamb. Mary goes to school. So the lamb goes to school.

No contractors are dependable. Some engineers are contractors. Therefore some engineers are not dependable.

All dancers are graceful. Ayesha is a student. Ayesha is a dancer. Therefore some student is graceful.

Every passenger is either in first class or second class. Each passenger is in second class if and only if he or she is not wealthy. Some passengers are wealthy. Not all passengers are wealthy. Therefore some passengers are in second class.

Formulating Predicate Logic Statements

New Additions in Proposition (First Order Logic) Variables, Constants, Predicate Symbols and New Connectors: ∃ (there exists), **∀**(for all) Example 1: I Wherever Mary goes, so does the Lamb. Mary goes to School. So the Lamb goes to School. Predicate goes(x,y) to represent x goes to y New Connectors (3) (there exists), (V) (for all) F1: $\forall x (goes(Mary(x) \rightarrow goes(Lamb(x))) \checkmark$ Mary Lamb F2: goes(Mary, School) G: goes(Lamb, School) To prove: $(F1 \land F2) \rightarrow G)$ is always true

No contractors are dependable. Some engineers are contractors. Therefore some engineers are not dependable. Predicates: contractor(x), dependable(x), engineer(x) F1: (∇x) (contractor(x) \rightarrow ~dependable(x)) [Alternative: 🖰 Ex (contractor(x) \(\Lambda \) dependable(x))] F2: $\exists x (engineer(x) \land) contractor(x))$ G: 3x(engineer(x) Λ ~dependable(x)) To prove: $(F1 \land F2) \rightarrow G)$ is always true Ix (engineer (2) -> contractor(2)) 1 3x enginana) FINF2 ->G

Example 3! -

More Examples Example: 4

All dancers are graceful. Ayesha is a student. Ayesha is a dancer.
Therefore some student is graceful.

graceful(x) student (x) dancer(x) Ayesha

F1: 4x 2 dancor(x) -> gracefula)

F2: student (Ayesha) F3: dancor (Ayesha)

G; Fx 2. student (x) 1 graceful (x)? [(F1 N F2 N F3) -> G] Every passenger is either in first class or second class. Each passenger is in second class if and only if the passenger is not wealthy. Some passengers are wealthy. Not all passengers are wealthy. Therefore some passengers are in second class.

p(x), f(x) s(x) w(x) \rightarrow wealthy

Lypassinger \rightarrow first class - ground class

1) $+ep(x) \rightarrow (f(x) \vee s(x)) \vee \sqrt{x}$

F2: 4x 2 p(x) -> 2(f(x) 1 -> 5(x)) V V (1 - f(x) 1 -> 6(x)) }

F2: 4x 2 p(x) -> ((s(x) -> 7 w(x)) 1)

(F3) 32p(x) NW(x)} (¬W(x) → B(x)))}

(F4) ¬ (4xfp(x)→W(x)}) (F4: 3xfp(x)N¬W(x))

(G:) 3xfp(x) N S(x) } (F1NF2NF3NF4)→6

Thank you propositional I variables constants predicate Logic predicates He forall I there exists -> codification of sentences into formulae -> Development of the combined formula VALID SATISFIABLE etc
