INDIAN INSTITUTE OF TECHNOLOGY, KHARAGPUR Department of Computer Science & Engineering

Programming and Data Structures (CS11001)

Class Test-II (Autumn, 1st Year)

Place: V-1, V-2, V-3, V-4, F-141, S-301, S-302 *Time:* 07:00-08:00pm

Students: 660

Date: Tue, Nov 09, 2011 Marks: 25

Answer ALL the questions.

Do all rough work on separate rough sheets (if needed) which you should not submit. Answer on the question paper itself in the spaces provided.

Roll n	0:	Section: Name:
1.	(a)	The number of comparisons required to find out the largest element of an array containing n elements
		is: <u>n-1 OR O(n)</u>
	(b)	In 'C' the index of the first element of an array is:0
		Consider the following type definition and variable declaration: typedef struct { int num, den; } ratTyp, *ratPtr; ratTyp ratVal, *ratP, ratArr[];
	(c)	The member num of ratVal is accessed as: <u>ratVal.num</u>
	(d)	The member den of the ratTyp structure pointed to by ratP is accessed as:
		ratP->den
	(e)	Code for dynamically allocating memory for an array of 10 ratTyp elements and storing the array address in ratArr is:
		ratArr=(ratPtr) malloc(10*sizeof(ratTyp))
2.	(a)	Minimum number of bits needed to represent the variable c , declared as "char c" is8
	(b)	The number of characters needed to store the string "Hello World!" is13
	(c)	The last character of the above string must be the <u>'\0' or NUL</u> character
	(d)	If the ASCII character code for ' \mathbf{A} ' is 65 then the character code of ' \mathbf{P} ' should be:80
	(e)	Let hwStr be declared and initialised as char hwStr[]="Hello World!", then * (hwStr+6)
		evaluates to:' w'
3. 1	For t	he following entities, present the suitable structure declarations (struct in running lines):
	(a)	The sinusoidal waveform $A\sin(\omega t + \delta)$:
		<pre>typedef struct { float a, t, omega, delta; } swaveTyp;</pre>

(CS11001)		Roll:	Sec:
(b) Data for a student	represented by his rollNnumber	and name (both strings):	
typedef struc	studTag { char rollNumbe	er[], name[];	yp, *studPtr;
(c) A course, represent students registered	ted by a courseNnumber (int) a for the course:	and data of a certain number	(known at runtime) of
typedef struc	courseTag { int courseN	umber, count;	
	studTyp stu	<pre>dents[]; } courseTyp,</pre>	*coursePtr;
Develop the datatype c :	rcleTyp (by typedef) to represe	ent a circle specified by the co	o-ordinates of its centre
	def struct { float x, y,	r; } circleTyp;	
Complete the function :	<pre>def struct { float x, y, .ntersecC() to check if two give</pre>	r; } circleTyp; en circles intersect.	
Complete the function :	def struct { float x, y, .ntersecC() to check if two give	r; } circleTyp; en circles intersect.	
Complete the function : int intersectC(ci // return values:	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of</pre>	<pre>r; } circleTyp; en circles intersect. { therwise</pre>	
<pre>type Complete the function : int intersectC(ci // return values: float distSqr; /</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw</pre>	<pre>r; } circleTyp; en circles intersect. { therwise yeen centres</pre>	
<pre>type Complete the function : int intersectC(ci // return values: float distSqr; / distSqr =</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw (c1.x - c2.x)</pre>	<pre>r; } circleTyp; en circles intersect. { therwise ween centres * (c1.x - c2.x) +</pre>	
<pre>type Complete the function : int intersectC(ci // return values: float distSqr; / distSqr =</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw (c1.x - c2.x) (c1.y - c2.y)</pre>	<pre>r; } circleTyp; en circles intersect. { therwise reen centres * (c1.x - c2.x) + * (c1.y - c2.y) ;</pre>	
<pre>type Complete the function : int intersectC(ci // return values: float distSqr; / distSqr = if (</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw (c1.x - c2.x) (c1.y - c2.y) distSqr > (c1.r + c2.</pre>	<pre>r; } circleTyp; en circles intersect. { therwise ween centres * (c1.x - c2.x) + * (c1.y - c2.y) ; r) * (c1.r + c2.r)</pre>	
<pre>type Complete the function : int intersectC(ci // return values: float distSqr; , distSqr =</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw (c1.x - c2.x) (c1.y - c2.y) distSqr > (c1.r + c2. ;</pre>	<pre>r; } circleTyp; en circles intersect. { therwise ween centres * (c1.x - c2.x) + * (c1.y - c2.y) ; r) * (c1.r + c2.r)</pre>)
<pre>type Complete the function . int intersectC(ci // return values: float distSqr; , distSqr = if (0 else return0</pre>	<pre>def struct { float x, y, .ntersecC() to check if two give ccleTyp c1, circleTyp c2) 1 for intersecting; 0 of / square of distance betw (c1.x - c2.x) (c1.y - c2.y) distSqr > (c1.r + c2. ;</pre>	<pre>r; } circleTyp; en circles intersect. { therwise zeen centres * (c1.x - c2.x) + * (c1.y - c2.y) ; r) * (c1.r + c2.r)</pre>)
